Usage of any items from the University of Cumbria’s institutional repository ‘Insight’ must conform to the following fair usage guidelines.

Any item and its associated metadata held in the University of Cumbria’s institutional repository Insight (unless stated otherwise on the metadata record) may be copied, displayed or performed, and stored in line with the JISC fair dealing guidelines (available here) for educational and not-for-profit activities provided that

• the authors, title and full bibliographic details of the item are cited clearly when any part of the work is referred to verbally or in the written form
  • a hyperlink/URL to the original Insight record of that item is included in any citations of the work
• the content is not changed in any way
• all files required for usage of the item are kept together with the main item file.

You may not

• sell any part of an item
• refer to any part of an item without citation
• amend any item or contextualise it in a way that will impugn the creator’s reputation
• remove or alter the copyright statement on an item.

The full policy can be found here.

Text messaging as a near synchronous method in adventure

Heather Prince, Associate Professor
First climb – Mont Ventoux
(1911 m)

“Of all the great mountains in the annals of cycling, Mont Ventoux reigns supreme ... it has a unique presence that makes any and every ascent a magnificent experience.” (Henderson, 2013, p.150)

“Constantly presented in the cycling press as one of the most dreaded climbs in the sport ...” (Spinney, 2006, p.710)

Half way up Mt Ventoux weather is really bad but we have put the tent up. Could you check the weather forecast to see what it is like in the next few days and this evening?
They have closed the mountain and they won’t let us up. People in cars are coming back down saying that we are not allowed to go.

Heaviest rain this pm & rain 2night becoming lighter then dry & sunny Tues am onwds. Wind now SSW 40 but 25kmh pm today then 30 kmh NW Tues becoming light by Wed am. Suggest u sit it out in tent if safe until tmrrw morning or retreat to valley tonight. It seems to be a bad weather blip. Take care.
Still have tent up but looking out now there is blue sky and the rain has stopped.

I think that occluded front might have gone over sooner than predicted. I suggest you wait ten minutes to see if road is open, then go.
Thanks P. Now enjoying pizza in Sault. Really good descent after we reached the top.
Context

- Cycle touring expedition: Orange via Southern French Alps to Valence
- 900 km, 17 high mountain passes in 13 days
- Two brothers, 17 & 20 years
- Parent-researcher (retrospective)
Data

Text messages (SMS): near synchronous
‘Connected presence’ (Licoppe, 2004)

Use of text messages for research in health-related contexts, not for research into remote support in
adventure.

• necessarily pertinent and focused
• ‘upended’ mobilities

Supplementary mobile conversations:
• interactionist approach (dialogic) for advice, information and reassurance.

cumbria.ac.uk
Methodological challenges

- Mobilities paradigm (transient adventure settings)
- Phenomenological and ethnographic (including autoethnographic approach)
- Not hermeneutic phenomenology

Co-construction of meaning through the interpretation of textual information and of lived experiences.

Advantages of delayed response in adventure situations?
Ethical questions

- Parent-researcher
- Familial relationship, bias, power (?)
- Retrospective use of data

Advantages
- Reliable data, critical insights into dialogic interaction, reflexivity
- Naturalistic fluency

Approved by University Ethics Panel

Debate about text messaging as a method ...
Text messaging
- Not ‘place-based’ immersion (Merriman, 2014)
- Not performative or participative in the active sense
- Questionable ‘embodiment’. Researcher is distant from adventure
- Necessarily focused and limited, although this might be seen as advantageous in adventure situations (non-intrusive?)
- Overtaken by social media? Range of media beyond words, more holistic picture of lived experience?
- Initiated by young people
- Cheap
- Reception more widespread than internet & focused, although mediated, information channel
Outcomes

Increasing autonomy
‘Transition’ stage
Reflections

Son 1: “Stop the parent worrying” but admitted contact was very useful for weather information and advice on wild boars;
Son 2: Appreciated support whilst journeying. Immediacy of response not so important.

Which party appreciated level of interactive support more? Depends on degree of adventure and level of competence of participants; experience and understanding of older adult.

Participants became more confident as journey progressed in confronting and rationalising unfamiliar social, cultural and psychologically challenging situations.
Following year, cycle tour Barcelona, Spain – Bristol, UK, via Pyrenees.
