Usage of any items from the University of Cumbria’s institutional repository ‘Insight’ must conform to the following fair usage guidelines.

Any item and its associated metadata held in the University of Cumbria’s institutional repository Insight (unless stated otherwise on the metadata record) may be copied, displayed or performed, and stored in line with the JISC fair dealing guidelines (available here) for educational and not-for-profit activities provided that

• the authors, title and full bibliographic details of the item are cited clearly when any part of the work is referred to verbally or in the written form

• a hyperlink/URL to the original Insight record of that item is included in any citations of the work

• the content is not changed in any way

• all files required for usage of the item are kept together with the main item file.

You may not

• sell any part of an item

• refer to any part of an item without citation

• amend any item or contextualise it in a way that will impugn the creator’s reputation

• remove or alter the copyright statement on an item.

The full policy can be found here. Alternatively contact the University of Cumbria Repository Editor by emailing insight@cumbria.ac.uk.
IMPROVING ASSESSMENT IN A COMPREHENSIVE AND SUSTAINABLE WAY:

Infrastructure, Strategy and Staff Learning.

Sue Bloxham
S.Bloxham@cumbria.ac.uk
STRUCTURE OF PRESENTATION

1. What makes for effective assessment – research trends
2. The state of current assessment practices
3. Barriers to implementing change in assessment and potential solutions
4. A framework for change
ASSESSMENT: WHAT THE RESEARCH SAYS:

- assessment is used to engage students in productive learning
- feedback is used to actively improve student learning.
- students and teachers become responsible partners in learning and assessment.
- students are inducted into the assessment practices and cultures of higher education.

- assessment for learning is placed at the centre of subject and program design
- assessment for learning is a focus for staff and institutional development
- assessment provides inclusive and trustworthy representation of student achievement.

David Boud and Associates (2010), Assessment 2020: Seven propositions for assessment reform in
• Diversify assessment to improve validity, authenticity and inclusivity,
• focus on assessing programme level outcomes.
• Less summative, more truly formative, assessment integrated with teaching and learning.

• Greater partnership in assessment, with a clear voice in institutional decision-making regarding assessment.
• Improve understanding of assessment expectations through greater opportunity for self- and peer review,
• support for study skills and academic integrity.

• Assessment literacy of academic staff paramount.

• technologies harnessed to enhance assessment practice, improve feedback and streamline assessment information and administration.
• students’ achievements communicated in fair and consistent ways

From A marked Improvement (2013) HEA
CHANGING ASSESSMENT PRACTICE TO SUPPORT RETENTION AND DIVERSITY

• Ensure plenty of formative assessment and dialogue
• Help students ‘understand the rules of the game’
• Resist the temptation to ‘spoonfeed’ students
• Help students develop academic and library skills
• Capitalise on the potential of students to help one another
• Consider how your assessment strategy and timing helps students with the transition to HE learning
BUT WHAT DO WE FIND?

• Poor validity in assessment methods – practices not kept pace with the outcomes we expect from a university education - remain dominated by unseen exams and essays;

• Poor balance of formative and summative assessment – restrictive use of formative assessment;

• Growth in summative assessment, with its negative backwash effect on student learning

• Atomisation of assessment to individual modules/ courses – not assessing programme outcomes,

• Many parts of the assessment cycle are not informed by evidence, e.g marking and moderation;
WHAT’S WRONG CONTINUED

• Unsustainable feedback practices;
• Students can remain confused about what is expected of them in assessment;
• Poor comparability and reliability in marking; standards are both fudged and challenged;
• Integrity of academic standards is at risk as web technologies and essay mills facilitate malpractice;

Is it surprising that we face:
  • continuing poor student satisfaction levels for assessment and feedback?
  • Increasing student complaints and appeals - many related to assessment (OIA 2012, OIA 2015)?
ASSESSMENT CHANGE IS SLOW

Lots of energy directed at changing assessment, particularly at institutional levels, but limited change?

The impact has mostly been at the level of individual academic staff.

University assessment traditions remain ‘stubbornly resistant to change’ (Ferrell 2012)
Centrally imposed change

Active resistance, cynicism

Response

Collaborative design and implementation of change

Respect ‘autonomy, agency and knowledge’ of teaching staff (Jessop, in press)

Avoid change by coercion

Change leaders not understanding values, ideas and experiences of those who have to implement change
Focus on individuals to drive change

Work groups filter and adapt proposals; Outcomes unpredictable and not as intended

Individuals powerfully influenced by ‘workgroup’ (Trowler et al 2005)

Response

Site for change should be immediate workgroup

Focus on ‘everyday’ teaching and teachers
Institutional policy and quality assurance

Restricts or directs change

why

Implicit emphasis on summative assessment

Response

Closer working between academic development and quality assurance

Ensure regulations and quality procedures support change
Modular course structures

Teachers focus on single modules and have limited sense of whole programme;
Too much module choice to allow for programme planning

Constrains an integrated approach to the students’ assessment experience

Response

Focus change at the programme level, looking at assessment across modules
Consider reducing student module choice
Institutional assessment discourse

Limits dialogue about formative assessment; focus on summative assessment

Dominant techno-rational, measurement discourse shapes assessment 'artefacts'

why

Response

Align messages of course approval and other documentation with proposed changes

Consider language of assessment debate
Assessment literacy

Unwillingness to change;
Practices stay traditional;
Unsophisticated implementation, e.g., formative assessment

Teachers disagree about the purpose of assessment; do not see the benefits of change; not familiar with and lack nuanced understanding of assessment concepts

**Response**

- Develop assessment literacy of stakeholders – staff and students
- Bring together those involved in teaching and assessment to review evidence and identify and prioritise areas that need change
- Work inductively from agreed problems to development of assessment knowledge and beliefs
- Share successful change examples once interest raised
Pressured environment

Unwillingness to change;
Move towards automated assessment

why

High workloads, staff lack time for change

Response

Workload neutral change as minimum
Risk

Change perceived as risky; staff anxious; pressure to retain ‘tidy’ assessment system and ‘tried and tested’ methods.

Response

Make proposed areas of change appear less or un-risky to managers, staff and students.

Consider carefully the risks that might attend any assessment innovation so they can be prepared for.

Use saturation CPD where it really matters, e.g. to ensure fair and consistent assessment procedures.

High degree of penetration in HEIs, therefore institutional change involves high numbers of staff and students; difficulty balancing autonomy and consistency.
Complexity of assessment

Simple assessment policies poorly implemented, easily rejected

Assessment is enormously complex; Requires experimentation and persistence (see list on next slide)
COMPLEXITY OF ASSESSMENT

• Valid, authentic assessment needs to reflect 21st century graduate outcomes;

• feedback is demanding concept: sustainability, dialogue, ownership, self-regulation, partnership – complicated to communicate or embed in programmes;

• Trustworthy judgement and grading is being revealed as complex and, potentially, unattainable;

• Involving students as assessors perceived as both vital to learning-oriented assessment and as risky, unfair and difficult to persuade student participation.
Complexity of assessment

Simple assessment policies poorly implemented, easily rejected

Why

Assessment is enormously complex; Requires experimentation and persistence

Response

Institutional level initiative should avoid determining specific assessment changes - focus on the general direction: creating principles and tools

Develop assessment literacy - of staff and students –

Use a scholarly approach
Building a guiding framework for institutional and departmental transformation in assessment

**Key principles**
- e.g. the importance of collaborative change

**Infrastructure**
- e.g. align QA documentation with change aims

**Strategy**
- e.g. implement change at ‘work group’ level

**Assessment literacy**
- e.g. prog. teams gain evidence of the student assessment experience
A guiding framework for transformation in assessment
