## **Managing the initial transition from student to professional radiographer: Making induction and preceptorship count**

Julie De Witt<sup>1</sup>, Charles Sloane<sup>2</sup>, Amanda Marland<sup>2</sup>, Paul K. Miller<sup>2</sup> and Mark Hoeltherhoff<sup>3</sup>

<sup>1</sup>*University of Derby, UK*

<sup>2</sup>*University of Cumbria, UK*

<sup>3</sup>*University of Edinburgh, UK*

*Background:* Today, increased marketisation of the higher education (HE) and health sectors requires that students in allied healthcare disciplines make an almost instantaneous shift upon qualification from a consumer identity to that of service provider, with a range of sharp corollary impacts upon their senses of self and accountability (Sloane and Miller, 2017). In these terms, how the earliest days of post-qualification employment are managed can have profound and long-lasting consequences. In this paper, emergent of a broader study funded by the College of Radiographers Industrial Partnership Scheme, findings around this initial transition period in diagnostic radiography are investigated.

*Methods:* With institutional ethical approval, N=20 ( $f=13$ ,  $m=7$ ) junior diagnostic radiographers working across the UK were recruited for extended, semi-structured telephone interviews. Verbatim transcripts were analysed using Straussian Grounded Theory (Waring et al., 2018).

*Results:* Participants reported a range of nuanced positive experiences of individually-tailored induction and preceptorship, which had smoothed the pathway into practice in both the short and longer terms; they helped rapidly align personal identities/expectations with that of a

“real radiographer.” While actively negative (often generic) experiences were reported to have stymied this process, an overall *absence* of induction/preceptorship was received more variably. While some participants felt undermined, others claimed that it had boosted their resilience and made them more ready for the challenges ahead.

*Conclusion:* Findings echo the concerns of Yale (2019), regarding personal tutoring in HE; it may be the case that no transition-management is better for new radiographers’ adjustment than something too generic and/or inflexible.
