FUTURE OF WORK

This Photo by Unknown Author is licensed under CC BY-NC-ND

“There will be very few jobs for life, much less security, and very little predictability. There will be an emphasis instead on being able to learn, develop, and adapt rapidly as new roles and tasks arise.”

“Instead, they have to build their own portfolios, made up of capabilities and competencies—being proficient at a range of particular tasks rather than at a specific job.”

HEI PRE-PANDEMIC SHIFTS

Even before the current crisis, changing technologies and new ways of working were disrupting jobs and the skills employees need to do them. In 2017, the McKinsey Global Institute estimated that as many as 375 million workers—or 14 percent of the global workforce—would have to switch occupations or acquire new skills by 2030 because of automation and artificial intelligence. In a recent McKinsey Global Survey, 87 percent of executives said they were experiencing skill gaps in the workforce or expected them within a few years. But less than half of respondents had a clear sense of how to address the problem.

RAPIDITY AND SCALE

*People are very open minded
about new things – as long as
they are exactly like the old ones*
– C F Kettering

The mix of occupations may shift by 2030 in the post-COVID-19 scenario.

Estimated change in share of total employment, post-COVID-19 scenario, 2018 to 2030,¹ percentage points

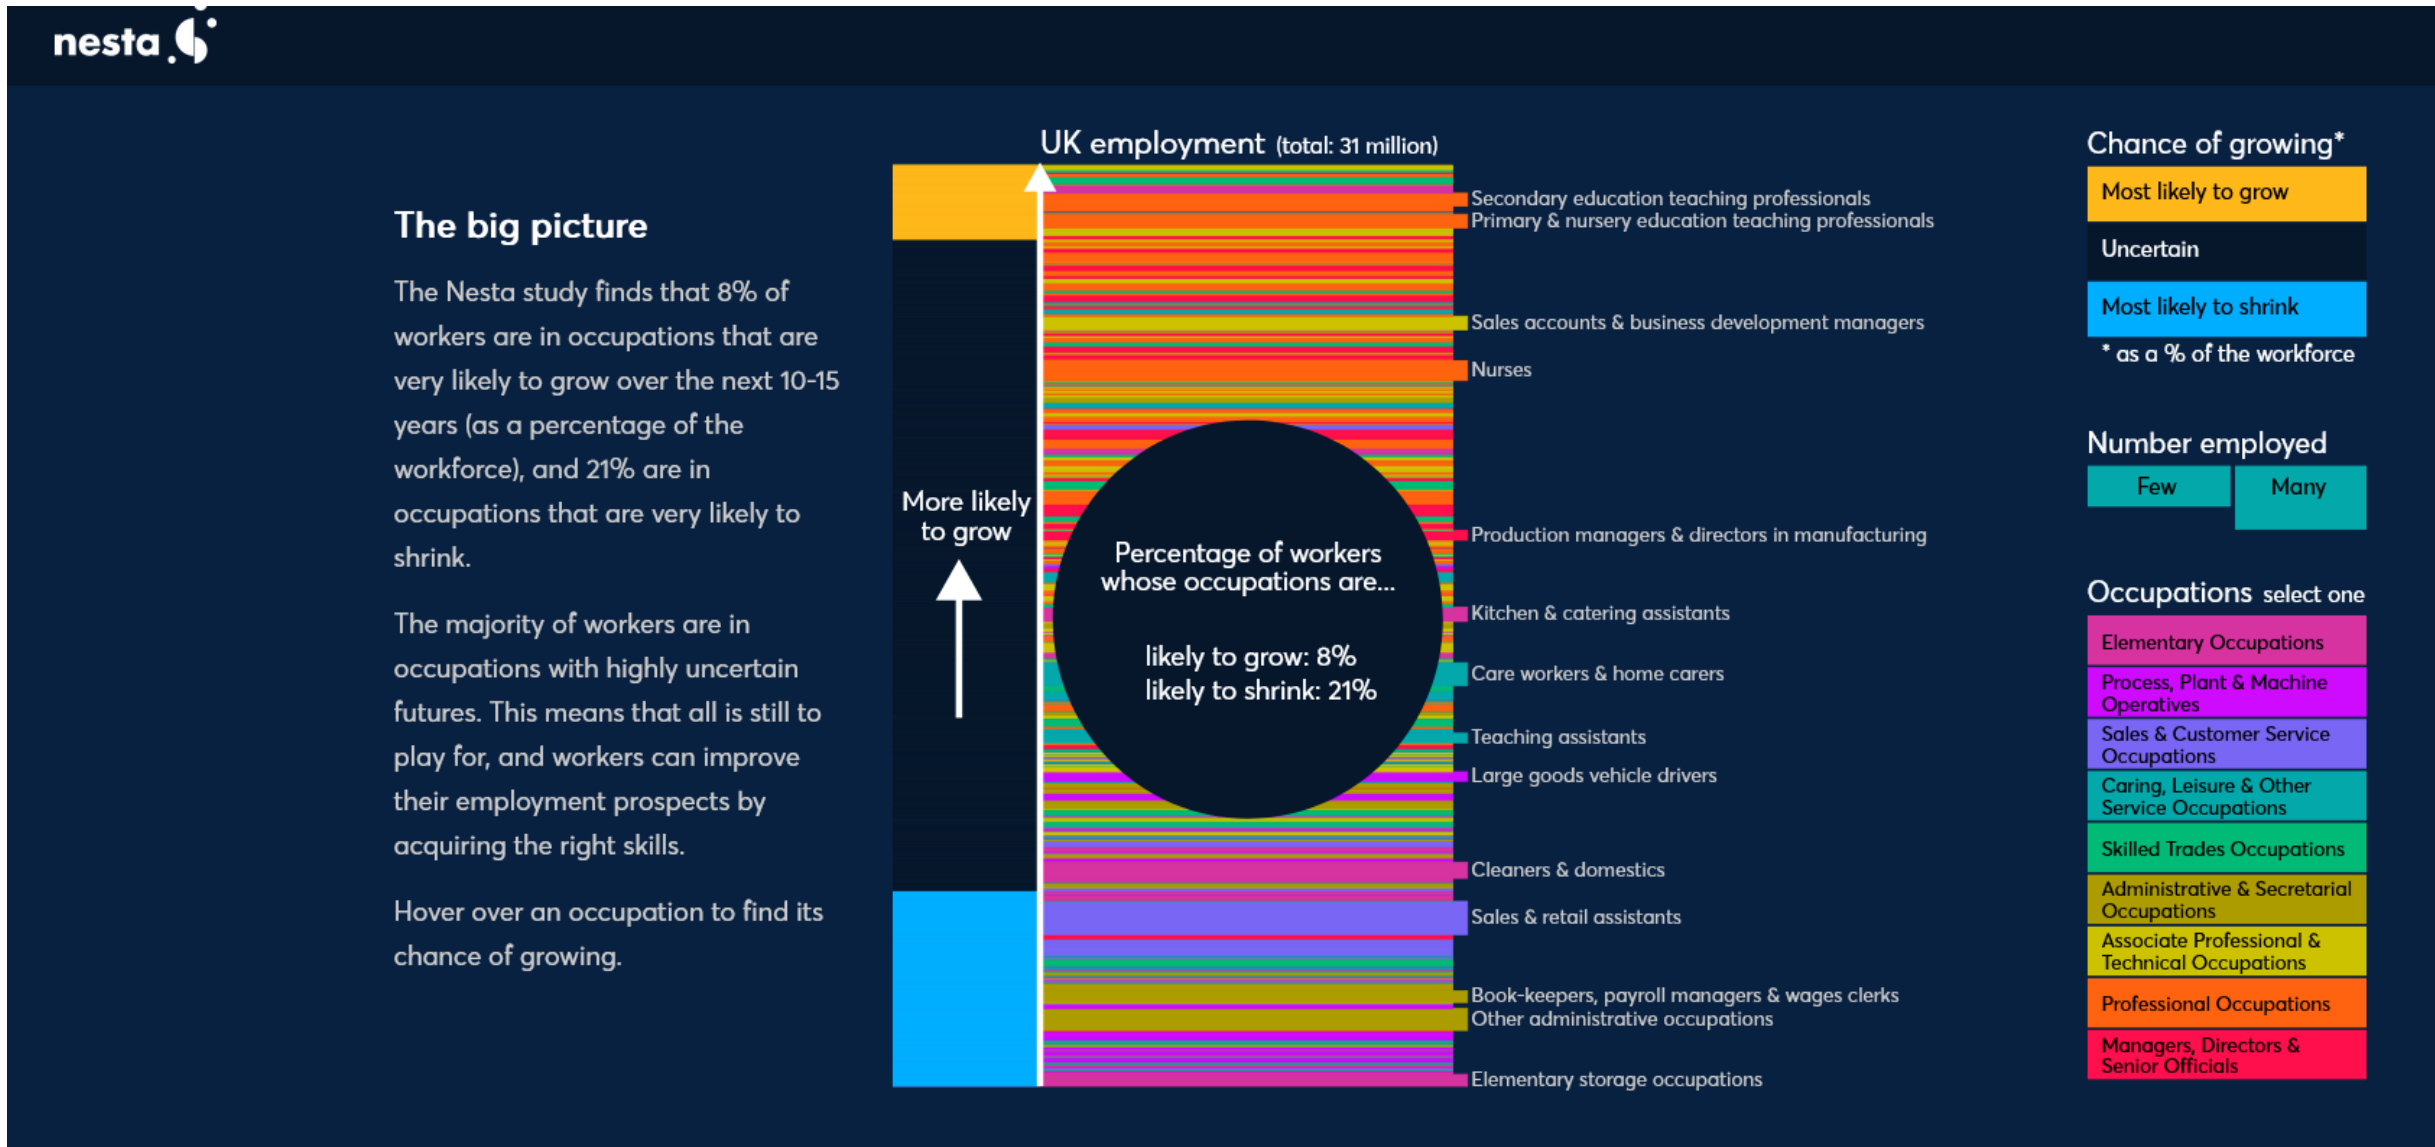

¹The pre-COVID-19 scenario includes the effects of eight trends: automation, rising incomes, aging populations, increased technology use, climate change, infrastructure investment, rising education levels, and marketization of unpaid work. The post-COVID-19 scenario includes all pre-COVID-19 trends as well as accelerated automation, accelerated e-commerce, increased remote work, and reduced business travel.

A UNIVERSITY IN AND FOR CUMBRIA

GRANULAR ANALYSIS

THE RACE TO ADDRESS THE DIGITAL SKILLS GAP

The pandemic accelerated the shift to digital, and now the Great Resignation or Great Re-evaluation... which has heightened the skills shortage.

There needs to be a “**massive reskilling of the digital economy**” to meet demand and companies [including universities] are not doing enough about it.

“We are seeing more jobs being created by small entrepreneurs, using IT systems... **Between 2020 and 2021, 9 million new jobs were created.**”

University of
CUMBRIA

Siemens has introduced an online learning platform for upskilling, to understand what capabilities are actually needed. How much of that talent is actually to be found internally, externally? How good is the local labour market? What are some of the demographic shifts coming up? **And once we know that, we're translating that into learning paths for individuals so we're trying to break down the big headline of talent scarcity and upskilling needs into real roadmaps for the different job profiles.**

RATIONALE...

for investing in a Centre for Digital Transformation is located within the Fifth Industrial Revolution (5IR), and how new and emergent technologies will continue to shape how we live, learn, earn, and access the world. The World Economic Forum posits that organisations who *“do not digitally transform will be left behind and will cease to exist...”* (Reddy and Morelix, 2020, np). Organisations that fail to critique this provocation, including universities, leave themselves in a position of unnecessary risk.

A recent UK government study found that 83% of graduate level vacancies required digital skills, and that around a third of unfilled higher-level jobs were vacant because candidates lacked the required digital capabilities. As businesses increasingly base their operating models on digital technologies, the demand for digitally able graduates will continue to rise. Digitally able graduates earn on average 33% more than those without higher level digital skills, providing a financial rationale for why students will increasingly expect their educational experiences to equip them with digital knowledge, digital capabilities, and subject relevant digital expertise

(DCMS, 2019).

As a result, the university sector will need to engage in digital workforce development – via upskilling and reskilling of academic and other staff – as well as modifying their programmes, to ensure that they are fit for purpose and real-world relevant; supported by a responsive IT infrastructure, and the effective use of available data

(Strategic Plan, Centre for Digital Transformation, UoC, 2022).

CENTRE FOR DIGITAL TRANSFORMATION: UoCONNECTED

VISION

The vision for the Centre for Digital Transformation (CDT) is that it will realise the University's ambitions to become an active demonstrator and exemplar of digital adoption and innovation in higher education. Through connecting the University of Cumbria community to design an educational offer that digitally equips, enables and engages people, places, practice and partnerships - now, and Towards 2030.
